

DMC1149 GENERAL PURPOSE MAINTENANCE KIT

For Electrical Connectors and Wiring Systems

DMC's General Purpose Tool Kit contains crimp tools, turrets, positioners, and metal insertion and removal tools for various Mil-Spec Connectors.

It is not a cost effective use of the time of your technical staff to start from scratch and try to become intimately knowledgeable about which precision tools must be used to repair each electrical connector, contact and terminal. The DMC1149 kit supplies your staff with both the information and the tools necessary to assemble and disassemble the various Mil-Spec Connectors.

DMC has cross referenced these tools to the connectors, contacts and terminals, eliminating costly and time-consuming research which would otherwise have to be performed by your electrical technicians. This information is contained in an easy to read tool selection chart.

In addition, the DMC1149 kit contains illustrated operating instructions for all the tooling included.
