5) 2=polarity reversal protection, 3=short circuit protection for all outputs
6) These proximity switches shall be used with UL Listed Cable assemblies rated 30V, 0.5A min, in the field installation, or equivalent (categories: CYJV/CYJV7 or PVVA/PVVA7)

Fading: black/white error < 50%
The black/white error is calculated from the scanning range against white and the reduction of the scanning range against black:

$$\text{Black/white error} = \frac{\text{Reduction of the scanning range against black}}{\text{Scanning range against white}} \times 100\%$$

Example:

Setting: "teach on object" at 160 mm on white 90%
- **Detection**:
  Black object, 6%, is detected at approx. 100 mm, the black/white error here is:
  60 mm / 160 mm = approx. 38%

Setting: "teach on object" at 120 mm on black 6%
- **Situation in background**:
  White object, 90%, is no longer detected at distance > 210 mm, the black/white error here is:
 90 mm / 210 mm = 43%

Adjusting the switching behavior of the switching output – light/dark switching

This function permits inversion of the sensors' switching logic.

- Press the teach button until only the green LED flashes. The yellow LED then shows the inverted switching logic:

ON	= switching outputs light switching (in the case of complementary sensors, Q1 (pin 4) light switching, Q2 (pin 2) dark switching), this means output active when object is detected.
OFF	= switching outputs dark switching (in the case of complementary sensors, Q1 (pin 4) dark switching, Q2 (pin 2) light switching), this means output inactive when object is detected.

- Release teach button.
- Ready.
