

Motor Controllers Industrial, 2-Phase Motor Reversing Type RR2A

- Motor reversing for 3-phase induction motors up to 5.5 kW
- Rated operational voltage: Up to 480 VACrms
- Built-in interlock function
- DC control voltage
- Built-in voltage transient protection
- LED indication for direction
- Insulation: Optocoupler (input-output) 4000 VACrms
- Direct copper bonding technology

Product Description

This family of 2-Phase Motor Reversing Controller is designed to switch 3-phase motors rated up to 5.5 kW. The built-in interlocking circuitry prevents the relay from switching both directions at the same time. A dual colour LED indicates direction "forward" when green and direction "reverse" when red. The output is protected from excessive voltage fluctuations (transients) by built-in varis-

tors. Furthermore, optimum reliability is achieved by soldering the output thyristor chips directly on to the ceramic substrate (Direct Copper Bonding).

The housing is designed to incorporate a temperature limit switch. It is recommended to install an appropriate semiconductor fuse in series with the relay.

Voltage Dips & Interruptions	EN 61000-4-11

* It is suggested that the input lines be installed together (such as a 3 core cable) to enhance susceptibility.

** Surge immunity level with an external transient voltage suppressor (47V) meets PC2 @ 1 kV between line to line and 2kV between line to ground.

Note: EMC tests were performed with representative motor loads of 1.1kW and 4.0kW. The above is just an indication of the EMC performance. The performance of the controller would have to be evaluated with the device connected and fitted as part of the complete system in the end application.
