### PRODUCT OVERVIEW

Mini-Circuits' ZVA-35703+ is a coaxial, medium power high frequency wideband amplifier, operating from 35 to 71 GHz. This model operates over a single positive supply range of +10 to +15 V, allowing users to choose their desired operating voltage. Internal DC-DC conversion circuitry maintains constant efficiency over the full input voltage range. The amplifier incorporates several DC-protection features, such as over-voltage, reverse voltage and in-rush current, that protect the amplifier from damage if mishandled during operation. The high frequency operation combined with medium output power makes this amplifier an ideal choice for 5G communications applications..

### KEY FEATURES

Feature	Advantages
High Freq amplifier, 35 to 71 GHz	Broadband amplifier focusing on 5G mmWave frequencies up to 71 GHz
Heatsink option	Model ZVA-35703+ comes with a heatsink, keeping the amplifier cool to the touch during normal operation at room temperature
Excellent gain flatness Low VSWR Medium output power	The amplifier provides 17.5 dB (typ.) of gain over the entire operating band and has high output power at saturation of 21 dBm (typ.) which makes it a good choice for applications that require a medium or high power amplifier at high frequency
Adjustable DC supply voltage	The device is capable of operating from +10 to +15 V with consistent DC power consumption
DC Protection – Over-voltage Reverse voltage In-rush current	The internal DC circuitry allows the amplifier to be protected from external mishandling that could lead to catastrophic failures in the field

1. Open and short-circuit loads are not recommended at the amplifier output. Ensure proper 50 Ohm load before turning the amplifier "ON".
2. Max. operating current is based on current when amplifier is in saturation.
3. For units with heatsink, limit ambient temperature to 50 °C.
4. For units without heatsink, limit the maximum baseplate temperature to 60 °C.

### DETERMINING MAXIMUM THERMAL RESISTANCE OF USERS' EXTERNAL HEAT SINK

$\text{MAXIMUM THERMAL RESISTANCE} = \frac{\text{MAXIMUM OPERATING CASE TEMP} - \text{MAXIMUM USER AMBIENT TEMP}}{\text{POWER DISSIPATION}}$	
<b>Example:</b>	MAXIMUM OPERATING CASE TEMP = 50 °C (CHECK MAXIMUM RATINGS TABLE FOR THIS VALUE) MAXIMUM USER AMBIENT TEMP = 30 °C (USER DEFINED) POWER DISSIPATION = 10 WATTS (CHECK MAXIMUM RATINGS TABLE FOR THIS VALUE) THEN MAXIMUM ALLOWABLE THERMAL RESISTANCE = 2 °C/W
