PRODUCT OVERVIEW

Mini-Circuits ZVA-50953X+ is a coaxial wideband and flat gain amplifier operating from 45 GHz to 95 GHz. The model operates over a positive supply range of +10 to +15 V, allowing users to choose their desired operating voltage. Internal DC-DC conversion circuitry maintains constant efficiency over the full input voltage range. The amplifier incorporates several DC-protection features such as over-voltage, reverse voltage and in-rush current to protect from damage in case of unexpected spikes in voltage during operation.

KEY FEATURES

Feature	Advantages
Wide-band amplifier, 45 to 95 GHz	A single amplifier serves the need for applications including Automotive, E-band communications, Test & Instrumentation.
Adjustable DC supply voltage	The device is capable of operating from +10 to +15 V, maintaining constant DC power consumption with no effect on RF performance.
DC Protection • Over-voltage • Reverse voltage • In-rush current	The internal DC circuitry allows the amplifier to be protected from external mishandling or unexpected spikes in voltage that could lead to catastrophic failures in the field.
